

Ahmad Baseer

Application Consultant

PROFILE

As an Application Consultant with experience in the banking industry, I specialize in delivering end-to-end solutions on core banking platforms — from compliance modules and biometric authentication to automated reporting and go-live deployments. I bring a strong technical foundation in Python, Java, and AI that allows me to automate workflows and eliminate inefficiencies that would otherwise take days of manual effort. I am a self-driven individual who enjoys solving complex problems and building solutions that make a real difference in how financial systems operate.

WORK EXPERIENCE

Application Consultant

Techlogix Private Limited • Karachi, Pakistan

Dec 2024 - Present

Techno Functional Consultant for a bank in Pakistan having conventional and Islamic branches

Jan 2025 – To Date

- Developed RESTful web services using OBX and integrated them into OBB for RT screens, enabling real-time data validation against business logic.
- Researched and pioneered a reusable approach for building custom maintenance screens in OBB, covering OJET field integration and database-level role/service activity configurations, adopted as a team standard.

Tools & Technologies:

OBB, Flexcube, OBX, Java, PLSQL, JavaScript

Techno Functional Consultant for a bank in Pakistan having conventional and Islamic branches

Mar 2025 – To Date

- Extended authorization limits for inward and outward clearing transactions to support new screens post-centralization, ensuring uninterrupted operations.
- Implemented validation of FCY transaction limits for bulk clearing and enabled auto-authorization limits for users, reducing manual intervention.
- Designed and implemented the complete eKYC module end-to-end, including risk calculation algorithms and approval workflows.
- Delivered an end-to-end solution for enabling biometric transactions on RT screens, enhancing security and user authentication.
- Configured debit card annual and issuance charge batches based on issuance date and user criteria, and validated compatibility of the issuance screen with downstream web services.
- Contributed to implementing a compliance control that automatically restricts banking services for proscribed individuals, reducing regulatory risk exposure.
- Built a CIF-level SAM automation screen by mapping BRD fields to data sources, enabling automated generation of 107 reports and fully eliminating manual reporting effort.
- Enhanced dynamic charge pickup logic based on account type and Mudarabah indicator, improving charge accuracy across product types.
- Updated CIF and account SOAP web services using the Silent ODT tool, ensuring data consistency across integrated systems.
- Collaborated in developing a Claude Code skill to generate RADs for custom screens, reducing manual effort from 2 days to 10 minutes.
- Automated post-patchset screen testing workflows using Playwright, covering login, record creation across multiple screens, and record authorization, significantly reducing regression testing time.

Tools & Technologies:

Flexcube, Java, PLSQL, JavaScript, Python

Techno Functional Consultant for International Client having Islamic branches

July 2025 – To Date

- Played a key role in the first international bank deployment, leading deployment verification, resolving invalid checks, and completing go-live configurations successfully.
- Configured a Generic Interface (GI) for uploading cheque book data and implemented a backend workaround for bulk status updates, streamlining cheque management operations.

Tools & Technologies:

Flexcube, Citrix, PLSQL

RESEARCH EXPERIENCE

3D Mapping of Buildings for Inspection | Research Project in collaboration with [RoadGauge](#) Ltd | **Final Year Project** [\[Link\]](#) [\[Preprint\]](#)

- Building inspections in the civil industry rely on expensive LiDAR systems, requiring specialized hardware, software, and professional expertise, leading to high costs.
- Developed a **photogrammetry** system to produce 3D models of indoor buildings, utilizing **IMU** to calculate **camera poses** for scale estimation and accurate real-world measurements.
- Nominated in multiple expos, cleared **FICS** stage 1, showcased at **ITCN Asia**, and attracted investment interest from renowned investors, including **Aspire Pakistan, Vertical Sols, NIC Karachi, Amps, and Volts**.

INTERNATIONAL HACKATHONS & COMPETITIONS

CALICO Fall 2024, UC Berkeley: Participated in the global coding competition hosted by UC Berkeley, achieving a rank of 248 out of 865 teams and connected with competitive programmers worldwide. [\[Link\]](#)

PROJECTS

- **Development of KYC Module in CBS**
 - Developed a comprehensive **eKYC screen** capturing personal information, risk-related fields, government-specific data, and real-time **PEP status** fetched via web service integration
 - Engineered a **multi-stage** approval workflow with dynamic routing based on user roles and customer risk categories
 - Built a **Risk Score** Mapping screen to configure field-level risk weights, driving automated customer risk profile calculation
 - Implemented a **multi-channel** eKYC creation module supporting integration with Backend Stored Procedures and Flexcube
- **OTC Transactions through Biometric Verification**
 - Developed a **Java API** leveraging the **SecuGen SDK** to capture and process fingerprint impressions from biometric hardware
 - Integrated the API with **JavaScript**, enabling real-time thumbprint capture and seamless verification through the **NADRA Biometric Service**
 - Implemented **Socket Programming** to establish reliable inter-application communication between two independent systems
- **Conversational Chatbot with Custom Knowledge Base:**
 - Developed an e-commerce chatbot using **Vertex AI**, trained on a text classification dataset to classify items and provide detailed information about listed objects, which required restructuring the dataset into **HTML** format.
 - Implemented a fallback mechanism to handle out-of-scope queries effectively.
- **Flask Based E-Learning Platform:**
 - A Flask-based backend application with **MySQL** integration, offering secure user authentication, session management, and course management. It enables **students** to browse, enroll in, take courses & quizzes and **teachers** to completely manage their courses.
 - **Core Features & Tools:** User authentication and session handling via cookies, file upload with image processing (Pillow), HTML content parsing (**BeautifulSoup**), and MySQL for database management.
 - Provides a robust and scalable backend for managing user sessions and course content securely, enhancing the overall learning experience with efficient content delivery and secure file handling.

EDUCATION

B.S in Computer Engineering

Sir Syed University of Engineering & Technology • Karachi, Pakistan
CGPA: 3.53/4

Oct 2020 – Aug 2024

Diploma in Artificial Intelligence

Presidential Initiative of Artificial Intelligence & Computing • Karachi, Pakistan
Percentage: 88% [\[Link\]](#)

Sept 2022 - June 2024

SKILLS

Programming: Python, JavaScript, SQL, MATLAB, C, Java, UML

Tools: MS Office, SSMS, Git, Docker, Postman, SoapUI, WinSCP, SQL Developer, Silent ODT, SVN, Android Studio, GCP, Firebase, PuTTY, AutoCAD(basic), MARS MIPS simulator, Multisim, Electronic Workbench

Banking & Core Systems: Oracle FLEXCUBE, WebLogic Server, OBB

AWARDS & CERTIFICATIONS

- **Achiever of The Month**, Techlogix Private Limited, Karachi. [\[Link\]](#) **Aug 2025**
- **Master Spring 6, Spring Boot 3, Rest JPA, Hibernate**, Udemy. [\[Link\]](#) **Aug 2025**
- **The Complete PL/SQL Bootcamp: “Beginner to Advanced PL/SQL”**, Udemy. [\[Link\]](#) **Aug 2025**
- **Arduino Champ Runner Up**, Muhammad Ali Jinnah University. [\[Link\]](#) **Jan 2023**

QUALITIES & STRENGTHS

- Ability to work by myself without need of constant supervision.
- Able to work harmoniously with other members of team.
- Possess strong problem solving & analytical skills.
- Strong Communication & Leadership Skills.
